

Economical Thinking

ECTS : 2

Description du contenu de l'enseignement :

This course provides an overview of fundamental economic concepts and tools used to understand how economies function. Students will explore key economic indicators such as GDP, inflation, and unemployment, and examine the forces that drive long-term economic growth and short-term fluctuations. The course also introduces the causes and consequences of inflation and delves into the evolution of economic thought, offering insights into how different schools of economics have shaped modern economic policy.

Compétence à acquérir :

- **Understand and interpret key economic indicators:** Learn to analyze GDP, inflation rates, unemployment data, and other core metrics to assess the health of an economy.
- **Analyze economic trends:** Develop the ability to identify and explain the causes of long-term economic growth and short-term economic fluctuations.
- **Evaluate the impact of policies:** Gain insights into policy-making and its effects on different sectors of the economy.
- **Apply economic reasoning to real-world problems:** Use economic models and concepts to critically assess policy decisions and market behaviors.
- **Understand the evolution of economic thought:** Explore how different schools of economic theory have influenced contemporary economic policies, providing a deeper understanding of today's global economy.
